

Hydraulic Transmission Tester

Test the transmission with fluid under pressure, the Hydraulic Tester simulates operating conditions in the unit and finds problems instantly. The Hydraulic Tester finds hidden defects in soft parts or can alert you to hard parts that have grown out of tolerance. A simple hook up to a unit test plate and the reading of a single gauge allows you to test a transmission in or out of the vehicle

Transmission Filling Tool

It is becoming far less common for transmissions to be provided with filler tubes and dipsticks, most recent units have to be filled via a filler / level bung in the sump pan. Finding methods to force fluid into the transmission in this way can be messy and time consuming, this tool has been specifically designed to make the job easier and cleaner. The tool consists of a 10 litre fluid pump and a set of 10 adaptors, the pump and adaptors are also available separately, so if you need to extend the usefulness of the tool by adding extra pumps or adaptors this can easily be done.
